

Linux Network Task

1. На Server_1 налаштувати статичні адреси на всіх інтерфейсах

Server1

```
# This is the network config written by 'subiquity'

      addresses:
        - 10.6.83.1/24
  version: 2
~
```

2. На server1 налаштувати DHCP сервіс, який буде конфігурувати адреси Int1 client1 та client2

```

```

Обидві віртуальні машини підключені одна до одної безпосередньо. Тому є між ними зв'язок.

На client1 призначити дві віртуальні IP адреси: 172.18.27.1/24 та 172.18.37.1/24. Налаштувати маршрутизацію таким чином, щоб трафік з client2 до 172.18.27.1 проходив через server1 а до 172.18.37.1 через net4. Перевірка за допомогою traceroute

По-перше на server1 необхідно включити forward пакетів – поправити файл /etc/sysctl.conf

```
# Uncomment the next line to enable packet forwarding for IPv4  
net.ipv4.ip_forward=1
```

Для застосування налаштування виконуємо команду:

```
root@server1:/home/user# sysctl -w net.ipv4.ip_forward=1  
net.ipv4.ip_forward = 1  
root@server1:/home/user#
```

На client1 призначаємо дві віртуальні адреси:

```
[root@client1 ~]# ip a add 172.18.27.1/24 dev enp0s8:1
```

```
[root@client1 ~]# ip a add 172.18.37.1/24 dev enp0s8:2
```

На client2 також призначаємо дві віртуальні адреси:

```
root@client2:/home/user# ip add add 172.18.27.2/24 dev enp0s3:1
```

```
root@client2:/home/user# ip add add 172.18.37.2/24 dev enp0s3:2

```

Розрахувати спільну адресу та маску (summarizing) адрес 172.18.27.1 та 172.18.37.1 префікс має бути максимально можливим. Видалити маршрути, які вставновлени на попередньому кроці, і прописати сумарний маршрут, для того щоб трафік йшов через server1

Пошук сумарного маршруту для 172.18.27.1 та 172.18.37.1:

```
10101100 000100010 00 | 011011 00000001

Якщо була налаштована маршрутизація для доступу client1 та client2 до мережі інтернет – видалити відповідні записи.

Налаштування NAT на server1 таким чином, щоб client1 та client2 змогли вийти в internet

Видаляємо статичні маршрути, які були встановлені на початку роботи:

Static Route

<input type="checkbox"/>	Destination IP Address	Subnet Mask	Gateway	Status	Edit
<input type="checkbox"/>	10.83.17.0	255.255.255.0	192.168.0.104	Enable	Edit
<input type="checkbox"/>	10.6.83.0	255.255.255.0	192.168.0.104	Enable	Edit

Доступ в мережу інтернет відсутній на client1

```
[root@client1 ~]# ping 8.8.8.8
PING 8.8.8.8 (8.8.8.8) 56(84) bytes of data.

Доступ в мережу інтернет відсутній на client2

```
root@client2:/home/user# ping 8.8.8.8

Додаємо правила nat на server1:

```
root@server1:/home/user# iptables -t nat -A POSTROUTING -s 10.6.83.0/24 -o enp0s3 -j MASQUERADE
```

```
root@server1:/home/user# iptables -t nat -A POSTROUTING -s 10.83.17.0/24 -o enp0s3 -j MASQUERADE
```

```

root@server1:/home/user# iptables -t nat -L -nv
